

Bibliography

BOOKS

I have either cited the following books in my discussion, or I have found them important in shaping my approach. For some edited volumes (as in *The Heart's Eye* or the *Handbook of Attachment*), I also have listed articles as separate entries. In other cases, however, the compilations (like the three volumes edited by Andy Clark and Josefa Toribio or Michael Gazzaniga's monumental *The Cognitive Neurosciences*) present a wide range of important and useful articles, but I refer the reader to the anthology as a whole rather than individually list the essays.

JOURNAL ARTICLES

The following list of articles is divided into separate topic headings to simplify searching through them. The articles offer much detailed information that can help fill out the necessarily brief discussions in the book. They also present the controversies and uncertainties that inevitably attend explorations of new fields. The list is idiosyncratic and reveals my preferences among research groups as well as the limitations in my readings. I hope the variety I present here may help lure my colleagues in the humanities in particular to begin their own explorations.

The subject headings are:

- Areas of the Brain
- Sensory Systems
- Emotion
- Higher Cortical Functions
- Memory
- Synaptic Connections
- Neural Network Modeling
- Infant Development
- Robotics
